New OSHA Regulation
1910.269
Will require linemen to wear
shields more often

Guaranteed to work with ALL Shields

HL4AA: MADI LED Head Light ARC Testing

Works with or without Flash Shield

Arc Test at 8,000
amps for 34 cycles

MADI headlight before the test. It has a Fire-Retardant strap, battery holder cover made of Silicone (which is also a Fire-Retardant), and with the light on.

- The Fire-Retardant strap DID NOT catch fire!
- The Silicone battery holder also DID NOT catch fire!
- And most Important, you can see the damage to the hardhat, the damage to the material around the mannequin face and MADI Headlight is still ON!
